Atmospheric Research, 29 (1993) 289
Elsevier Science Publishers B.V., Amsterdam

Contents Volume 29, 1993

Editorial i

Fog induced by mixed-phase precipitation
N.R. Donaldson and R.E. Stewart 9
Lightning and electrical structure of mesoscale convective systems
S.A. Rutledge, E.R. Williams and W.A. Petersen 27
Microphysical kinetics in phase space: The warm rain process
T. Hauf 55
Prediction of snow crystal shape and riming by vertical Doppler radar
L. Mosimann, M. Steiner and W. Henrich 85
On the stochastic approach to the kinetics in polydisperse multicomponent populations
T. Trautmann 97
Charge separation associated with splashing of water drops on solid surfaces
D.M. Chate and A.K. Kamra 115
On the formation of non-adiabatic LWC profile in stratiform clouds
A.V. Korolev 129

Guide for authors

Oxygen isotopic variations of snowfall from winter storms in the central Sierra Nevada; Relation to ice growth microphysics and mesoscale structure
J.A. Warburton, B.B. Demoz and R.H. Stone 135
Distributions of precipitation and associated parameters across precipitation type transitions over southern Ontario
R.E. Stewart and D.T. Yiu 153
Airborne microphysical measurements and radar reflectivity observations near a cold frontal rainband observed during the FRONTS 87 experiment
V. Marécal, D. Hauser and C. Duroure 179
Measurements of natural ice nuclei with a continuous flow diffusion chamber
D.C. Rogers 209
On spatial distributions and inter-droplet distances measured in stratus clouds with in-line holography
S. Borrmann, R. Jaenicke and P. Neumann 229
Temperature gradients in ice as a charge generation process in thunderstorms
E.R. Jayaratne 247
Charge separation during the fragmentation of rime and frost
C.P.R. Saunders, M. Hickson, M.D. Malone and J. Von Richtofen 261

Book Reviews 271
